

City of Barcelona Further Develop the Use of Autogas throughout the City

Did you know?

- The total number of vehicles powered by autogas in Spain is around **3,000**.
- Approximately **700 vehicles in Barcelona** and **650 in Madrid** currently run on autogas.
- Repsol Chairman, Antonio Brufau, and the Mayor of Barcelona, Jordi Hereu, signed an outline **collaboration agreement in April 2010** committing them to develop further the use of autogas in the city of Barcelona.
- In Europe, more than **7 million vehicles run on autogas**, including 1,500 city buses in 25 European cities that represent a **total annual saving of 2.7 million tons of CO₂**.

Repsol and the Barcelona City Council will participate in informative and promotional joint activities on autogas.

In Europe more than 7 million vehicles run on autogas, which is a total annual savings of 2.7 million tons of CO₂.

What are we doing?

- The Barcelona City Council is working towards **ensuring the successful implementation of autogas** and speed up the procedures for obtaining the necessary permits and licenses for selling autogas in the Repsol service stations throughout Barcelona.
- **Autogas will therefore be promoted** in vehicle fleets for municipal and supra-municipal authorities, as well as concessionary and municipal companies. Repsol, in turn, will actively collaborate in converting the vehicles in these fleets to run on autogas.
- Repsol and the Barcelona City Council will participate in promotional activities, sponsoring public events and technical conferences that are designed to promote the use of this fuel and its benefits.
- Repsol is currently developing a nationwide project that will include the **installation of 80 autogas points of sale** by the end of 2010. Some of which, such as the service station in the Barcelona Villa Olímpica and the service station at the T2 terminal of Barajas airport in Madrid are already operational.

What is the result?

- Repsol is committed to this agreement by installing **the necessary infrastructure for refuelling with autogas** in its service station network in the Barcelona municipal area, and planning and collaborating with the different measures to promote its use.
- The agreement in brief:
 - **Repsol will promote the installation** of the necessary facilities at its service station network in Barcelona to promote refuelling with autogas.
 - **The Barcelona City Council will facilitate** the process of obtaining the necessary permits for selling autogas at Repsol service stations.
 - **Repsol and the Barcelona City Council will participate** in informative and promotional joint activities on autogas.
 - By the end of 2010, **Repsol will have 80 autogas refuelling points** throughout its national service station network.
 - **Autogas is the most widely used alternative fuel in the world.** It is economical to use and helps improve the air quality in big cities.
